Qixel Instructions

1. Use paper template to design "Qixel." This could be a robot, a flower, or anything you can think of!

2. Take top tray (with holes) and place it on the bottom tray (with pins), using small tabs to lock into place.

3. Firmly press each cube onto the pins on the tray, matching the colors of the design.

4. Firmly press over your completed design, leveling all cubes.

5. Fill water sprayer and soak design with 25 sprays of water, ensuring all cubes are covered.

6. Tilt design tray and shake off excess water - this reduces drying time.

7. Lay flat and leave to dry for about 30 minutes.

8. Once dry, pull top tray off the bottom tray to remove your finished Qixels creation!
